EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ko-Fang Chang on 07 April 2005.

The application has been amended as follows:

In the Specification:

1) The abstract has been amended as follows:

The present invention provides techniques for generating a coversheet for a paper document comprising one or more pages, wherein the paper document is generated by printing a printable representation of multimedia information on a paper medium. The coversheet may provide a summary of the contents printed on pages of the paper document.

2) The Specification has been amended as follows:

Page 2, line 18, add "10/001,895" after "Application No."

Page 2, line 21, add "10/001,894" after "Application No."

Page 2, line 25, add "10/001,849" after "Application No."

Page 2, line 28, add "10/001,891" after "Application No."

In the claims:

Claim 1 (lines 5-6) has been amended as follows:

printing a thumbnail image [[of]] for each page in the one or more pages of the multimedia paper document on a paper medium to generate the coversheet.

Claim 24 (lines 6-7) has been amended as follows:

code for printing a thumbnail image [[of]] for each page in the one or more pages of the multimedia paper document on a paper medium to generate the coversheet.

Reasons for Allowance

2. Claims 1-8 and 16-28 are allowed.

3. The following is an examiner's statement of reasons for allowance:

Independent claims 1, 16, and 24 have been carefully considered. Prior art of record fails to teach the combination of claimed elements including a method of generating a coversheet for a multimedia paper document having printable representation of multimedia information including video information, wherein the printable representations are printed on a plurality of pages, and then generating the coversheet by printing a thumbnail image for each page of the multimedia paper document on a paper medium.

Schelling et al (US 5,706,097) discloses a method for identifying images

and sound recordings and creating an index print having a plurality of index images representing still images, motion sequences and sound sequences on a digital recording medium. Schelling teaches that the index print may be used for printing an image of the document but fails to teach or suggest generating pages having printable representations of the multimedia information and then printing a thumbnail image for each page of the index print.

Gibbon et al (US 6,098,082) discloses pictorial transcript representation of a video program in a format suitable for electronic searching and retrieval. Gibbon teaches that pictorial transcripts are compact representations of video programs having representative frames printed with a caption containing the portion of the closed-caption text that corresponds to the scene from which the representative frame is taken. Gibbon fails to teach or suggest that the pictorial transcript may be used for generating pages having printable representations of multimedia information and then printing a thumbnail image for each page of the multimedia paper document.

Conclusion

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly
